

seca 416 & 417 & 210 & 207:

Reliable partners for healthy growing.

One of the central tasks in pediatrics is to recognize growth disorders in children as quickly as possible. Only then can effective therapies be applied to also avoid illnesses which may arise from these disorders. Only precise results lead to a correct diagnosis – in order to ascertain how fast a child grows in inches per year (essential for the dynamic assessment of the growth of a child), inch precision is called for. Such precision is possible with the modern and handy measuring instruments from seca.
